ResMed SlimLine Tubing

Non-heated CPAP / BiPAP air tube

A lighter, less bulky hose.

Choose the right tube for your machine and match its tube-type setting.

Key specifications

Part / length
36810 / 1.8 m

Internal diameter
15 mm

End connectors
22 mm cuffs

Heating
Non-heated

Pack contents
1 replacement air tube

Know the difference

SlimLine: 15 mm internal bore.
Standard: 19 mm internal bore.

Both have 22 mm end cuffs. Connector size and internal diameter describe different parts of the hose.

Connection and tube settings

Use on a compatible PAP setup. Where supported, select SlimLine / 15 mm as directed by the machine guide. Hold the cuffs when connecting and disconnecting. Neither hose is a direct replacement for the dedicated AirMini tubing.

Humidification and care

A compatible heated humidifier can be used with non-heated tubing. Hose heating requires a separate, device-specific heated tube. Clean according to the device guide, rinse thoroughly and air dry away from sunlight and heat. Inspect the hose and cuffs; replace damaged tubing.
